

Impact of career adaptability and mental health issues on students

Abstract

In today's age of competition, the word career has become a very important and serious issue. In today's world, every person's mind is connected with dreams and hopes with the word career and at least every person or student who thinks seriously about their career goes through a lot of stress and with stress comes good and positive thoughts and hopes due to which there is a possibility that a student may get into a lot of mental trouble issues. So, the aim of this study is to find the impact of career adaptability and mental health issues on adolescent students.

The mechanism of how career adaptability can contribute to adolescent's mental health problems remains unclear in mainland India. The present study aims to explore the impact of career adaptability on mental health issues in adolescents (age between 13-19 years). **Purpose of the study** is to investigate the impact of career adaptability on mental health problems or issues of the adolescent students. In adolescence and emerging adulthood, a lot of factors affect career choices like gender, financial situation, parents likes- dislikes, social life, social situation, identity formation, low self-control and self-esteem, physical development, ununderstanding for self, etc and all these factors can affect on students mental health and it can impact negatively on student's mental health and can create mental issues for students like anxiety, phobia, stress, depression. **Method-** Participants will be 100 adolescent students of Anand district of secondary and higher secondary students. The test will include the questionnaire. There will be questions related to mental health in the questionnaire. In which the students will make aware of the impact of their understanding and interest of their own career, their vision about their future, their perception of society and the world, etc. effects on their mental health and which can affect their career decision. Their age will be between 13-19 years old. I will prepare a Questionnaire. I will use Survey method to collect data. The result will find that career adaptability negatively impacts mental health problems and resilience mediate the relationship between career adaptability and mental health problems. **Conclusion-** In light of results, several managerial suggestions related to career education and career counselling practices for adolescents, as well as implications for future research are provided. Findings can provide cross-cultural theoretical implications and contribute to evidence-based social policy and social work intervention to promote adolescent's mental well-being. Questionnaire may help to improve assessment and treatment of adolescents with severe psychological problems or issues. This study can boost the morale of adolescent students.
